

**Centeron**<sup>®</sup>

*The World's No. 1 Wireless Tank Monitoring System*

**CENTERON CALL BLOCK INFORMATION**

Call Block Part No.	Number of Calls Added
DCB001000	1000
DCB001095**	1095
DCB005,000	5,000
DCB010,000	10,000
DCB025,000	25,000
DCB050,000	50,000
DCB100,000	100,000
DCB250,000	250,000
DCB500,000	500,000
The larger the call block, the less cost per call.	

CDMA (3G and obsolete) and 4GLTE cellular monitors transmitting only once a day will remove 1 call from a call block. Two calls per day remove just .85 call each (1.7 calls per day)

\*\*An Ethernet Gateway, set to 'Report all Calls', will update data for up to 40 tanks, 24/7 365, for each tank, for 3 calls per day (1095 calls per year, absolute best deal for bulk plants)

A Cellular Gateway, set to 'Report all Calls', will update data for up to 40 tanks, 24/7 365, for each tank, for 4 calls per day. A Cellular Gateway is used where 120vac power is available, but no Internet connections is.

A call plan automatically renews unless terminated by the customer.

Level alerts remove one call from a call block when set to transmit when crossing the alert level. The actual alert message is then be sent to as many persons as desired via email or text message at no additional charge.

All controllers must be disconnected for 10 consecutive days to receive credit for unused calls after termination.

Calls made by a controller after termination will be charged.

**Please call for pricing, or help developing a site, using the Centeron Tank Level Monitoring System.
